

CASE STUDY - FLAT ROOF REFURBISHMENT

PROSPECT SHOPPING CENTRE

HULL

PROJECT OVERVIEW

CLIENT:

Prospect Shopping Centre

CONSULTANT:

Workman, Newcastle-on-Tyne

SIZE: 940m²

ROOFING MATERIALS:

Icopal Profiles

As part of the overall refurbishment of this busy city centre shopping facility, BBR Roofing were contracted to refurbish the flat roof areas.

The re-roofing specification called for Icopal's Profiles Vent XL bituminous felt system, with the installation being required to be carried out by an Intelligent Membrane Association accredited contractor.

After preparation of perimeter parapets by stripping out the existing felt and boxing them out with new plywood, the overlay system of Profiles Vent XL was installed according to the Icopal specification. The Profiles vent system is partially bonded, which allows for vapour diffusion of any residual moisture within the existing roof covering.

All works were completed with negligible disruption to the shopping centre's occupants and visitors.
