

CASE STUDY - PITCHED ROOF REFURBISHMENT

THE BARRACKS

LANCASTER

BBR Roofing were contracted by Lancashire County Council to refurbish the existing Burlington Slate roof of this listed building which was to remain fully occupied by commercial tenants during the works. One of the businesses within the building was a call centre, which was particularly sensitive to noise and disruption.

BBR Roofing stripped off the existing slate roof covering, installed new under-slating membrane and battens, and replaced most of the original Burlington slates, making up the shortfall by sourcing a mix of reclaimed and new slates. All associated lead-work was also replaced.

The completed roof was faithful to the heritage aspects of the original roof and the works were carried out with only a minimum of disruption to the tenants, as well as being on time and within budget.

PROJECT OVERVIEW
